RUNIT KUMAR RAUSHAN

+91-9586040201 | runit.raushan@gmail.com | LinkedIn

PROFESSIONAL SUMMARY

Software Engineer with **10+ years** of experience designing and building **scalable microservices architectures** in **Java and Spring Boot**. Architected a **6-microservice platform** with Redis-backed session management, Spring Security with RBAC, and an API gateway — serving **30,000+ users** across 60+ schools on AWS. Co-founded and led the technical vision for an edtech SaaS startup. Experienced in establishing engineering standards, mentoring developers, and driving end-to-end technical delivery from database schema design to production deployment.

WORK EXPERIENCE

Aureus Tech Systems *(now acquired by Happiest Minds)* — Senior Software Engineer

October 2022 – August 2024

Worked with Swiss Re, a leading corporate insurer, on RESTL — a Risk Engineering Services platform designed to analyze risk factors and mitigate potential threats.

- **Tech Stack:** Java, Spring Boot, Hibernate, JPA, PostgreSQL, TypeScript, Angular, Azure DevOps
- Designed and implemented a **reusable, dynamic risk factor module** leveraged across **25+ modules** — covering database schema design, REST API development, and front-end components — reducing redundant development and accelerating release cycles.
- Established **development guidelines and coding standards** (code review checklists, naming conventions, API design patterns) that were adopted across the team (~25 members including dev, QA, and product), improving code consistency.
- Mentored team members on **clean coding practices and SOLID principles**, contributing to improved code quality and faster onboarding. Recognized with **awards for technical excellence** and contributions to project success.

Pepstudy Education Pvt. Ltd. — Co-Founder & Chief Product Officer

November 2018 – August 2022

*Founded and led the technical vision for Pepstudy, an edtech SaaS platform serving **30,000+ users** across **60+ schools** in India, enabling classroom assessments in offline (OMR) and online modes, with AI-powered analytics for students, teachers, and schools.*

- **Tech Stack:** Java, Spring Boot, Spring Security, Spring Session, Hibernate, JPA, MySQL, Redis, TypeScript, Angular, Ionic, AWS (EC2, RDS, S3, SES, SNS, CloudFront, Route 53)
- Architected a **6-microservice system** (Auth, Content, Email, Analytics, Plus, Aggregator) with **5 shared library modules** across **11 Git repositories**, with strict dependency ordering and independent deployability via a **16-module Maven build**.
- Designed an **API gateway service** (Aggregator) routing all client traffic to downstream microservices, with inter-service communication via RestTemplate and correlation/transaction ID propagation for request tracing.
- Implemented **Redis-backed distributed session management** with custom serializers, enabling cross-service authentication across 4 microservices with pluggable session strategies (cookie-based, header-based, and hybrid).
- Designed an **80-table relational schema** across **5 separate MySQL databases** on Amazon RDS, enforcing strict data ownership boundaries per service, supporting multi-level analytics (student → teacher → school → city → state).
- Implemented **Spring Security with RBAC** — custom security filter chains, OAuth-based social login, OTP-based multi-factor authentication, and URL-pattern authorization across all services.
- Integrated **Razorpay payment gateway** for premium course subscriptions, handling payment lifecycle (creation, verification, callbacks) with secure API key authentication.
- Engineered **multithreaded processing** for test result generation, reducing computation time by **up to 99%**, enabling faster delivery of insights for schools.
- Led a **framework migration from Spring Boot 1.5.x to 2.7.x** across 16 Maven modules and 11 repositories — including Hibernate upgrades, connection pool migration (Tomcat JDBC → HikariCP), and multi-module build coordination.
- Deployed and managed application servers on **AWS EC2**, leveraging RDS for database management, S3 for storage, CloudFront CDN for static assets, SES for email delivery, and SNS for notifications.

- Rapidly developed an **Android app using Ionic and Angular within a month** during COVID, enabling seamless online test conduction when schools shut down.
- Automated **multi-environment deployment** (dev, staging, production) with deployment scripts and environment-specific Spring profiles, reducing provisioning time and manual errors.
- Led **recruitment, training, and mentorship** of developers within a 12-person team, establishing code review processes, sprint planning, and engineering standards.

---

ezDI, Inc *(now acquired by AGS Health)* — Senior Product Engineer

June 2015 – October 2018

ezDI built a healthcare platform for Computer-Assisted Coding (CAC), Clinical Documentation Improvement (CDI), and Audit solutions, leveraging Machine Learning and NLP for the U.S. healthcare industry.

- **Tech Stack:** Electron, Angular, TypeScript, MySQL, Java, Spring Boot, WebSocket
- Developed a **real-time transcription desktop application** for physicians using Electron and Angular, integrating WebSocket APIs for streaming audio-to-text conversion from a transcription service.
- Led the development of an **Admin platform for hospital onboarding**, enabling end-to-end provisioning of hospitals and hospital groups with multi-factor authentication and role-based access.

SOFTWARE SKILLS

Category	Technologies
Backend	Java, Spring Boot, Spring MVC, Spring Security, Spring Session, Hibernate, JPA, MapStruct
Databases & Caching	MySQL, PostgreSQL, Redis, HikariCP, Amazon RDS
Cloud & Infrastructure	AWS (EC2, S3, RDS, SES, SNS, CloudFront, Route 53), Azure DevOps, Docker, Git, GitHub, GitLab
Frontend	TypeScript, Angular, Ionic, Electron
Practices & Patterns	Microservices, RESTful APIs, API Gateway, RBAC, SOLID, Design Patterns, Agile/Scrum

---

EDUCATION

Indian Institute of Technology (IIT) Kharagpur — B.Tech, Electronics & Electrical Communication Engineering | 2011 – 2015
